

Each square represents a 10'x10' area. A 60" round table with chairs around it will fit comfortably within each square. The dance floor is made up of 3'x3' sections. For an average size floor, divide your guest number by 4 and that is how many sections you require. A typical bar requires 1-2 squares. Buffets are usually 1-3 8' tables. Building this yourself by placing your necessary pieces in the squares will give you a good idea of what tent size you need (i.e. 40x60, 50x80 etc.). Everything is to scale, so cut and paste your way to your own design! Then call us and we'll review your layout and provide a quote!
